« BUSINESS TERMS »

LOCATION: Nurseries are located on Lealman Avenue at Haines Road, St. Petersburg, Florida. Phone 83-250. Nursery is open daily from 8 A. M. to 5 P. M. Sundays, we are open afternoons only from November to April.

In as much as we have cut our prices to the lowest point conducive to the production of quality stock, we do not carry charge accounts. All of our products are strictly cash. Orders for C.O.D. shipments must be accompanied by cash to the amount of 25 per cent of order, to insure acceptance.

RATES: Five of a variety will be supplied at the ten rate and fifty at the one hundred rate.

PLANTING: An added charge is made for planting. This usually amounts to about 20 per cent of the order and includes sufficient soil and fertilizer to properly start the plants. Where plants have to be moved, we make a cost charge for the labor and materials used.

PLANS: We make no charge for inspection and suggestions, but do make a cost charge for ground plans. The ground plan will be free for jobs of \$100 or more.

LANDSCAPING: Do not forget that we have available for you a man who has had thirty years experience in Florida, covering all phases of horticultural work. His services are yours for the asking. You will also find every other member of the organization ready at all times to help you with your problems.

GUARANTEE: Soule's Gladiolus Garden gives no guarantee, express, or implied, on any seed, bulbs, flowers or nursery stock put out by us, except that we will replace any plant or bulb proving untrue to name. In no case will we be liable for more than the price paid for the plants or bulbs proving untrue to name. In cases where plants or bulbs are shipped, our responsibility ceases on delivery to the Post or Express Office.

SHIPPING. We are prepared to ship plants or bulbs of all kinds to practically all States. Our packer has had many years experience in packing plants, both for domestic and for foreign shipments.

REMITTANCES: Express or post office money orders.

PARCEL POST SHIPMENTS: Please add 25 per cent to list price to cover cost of additional packing and postage.

SUBSTITUTIONS: If out of the item ordered, we will not substitute unless so directed.

CLAIMS: If, by any possibility, errors should occur, they will be promptly rectified if claim is made within ten days after receipt of goods.

VISITORS: We are always glad to show our stock to visitors any time within business hours or at other times by special appointment.

HAINES ROAD AT LEALMAN AVENUE
ST. PETERSBURG ■ FLORIDA

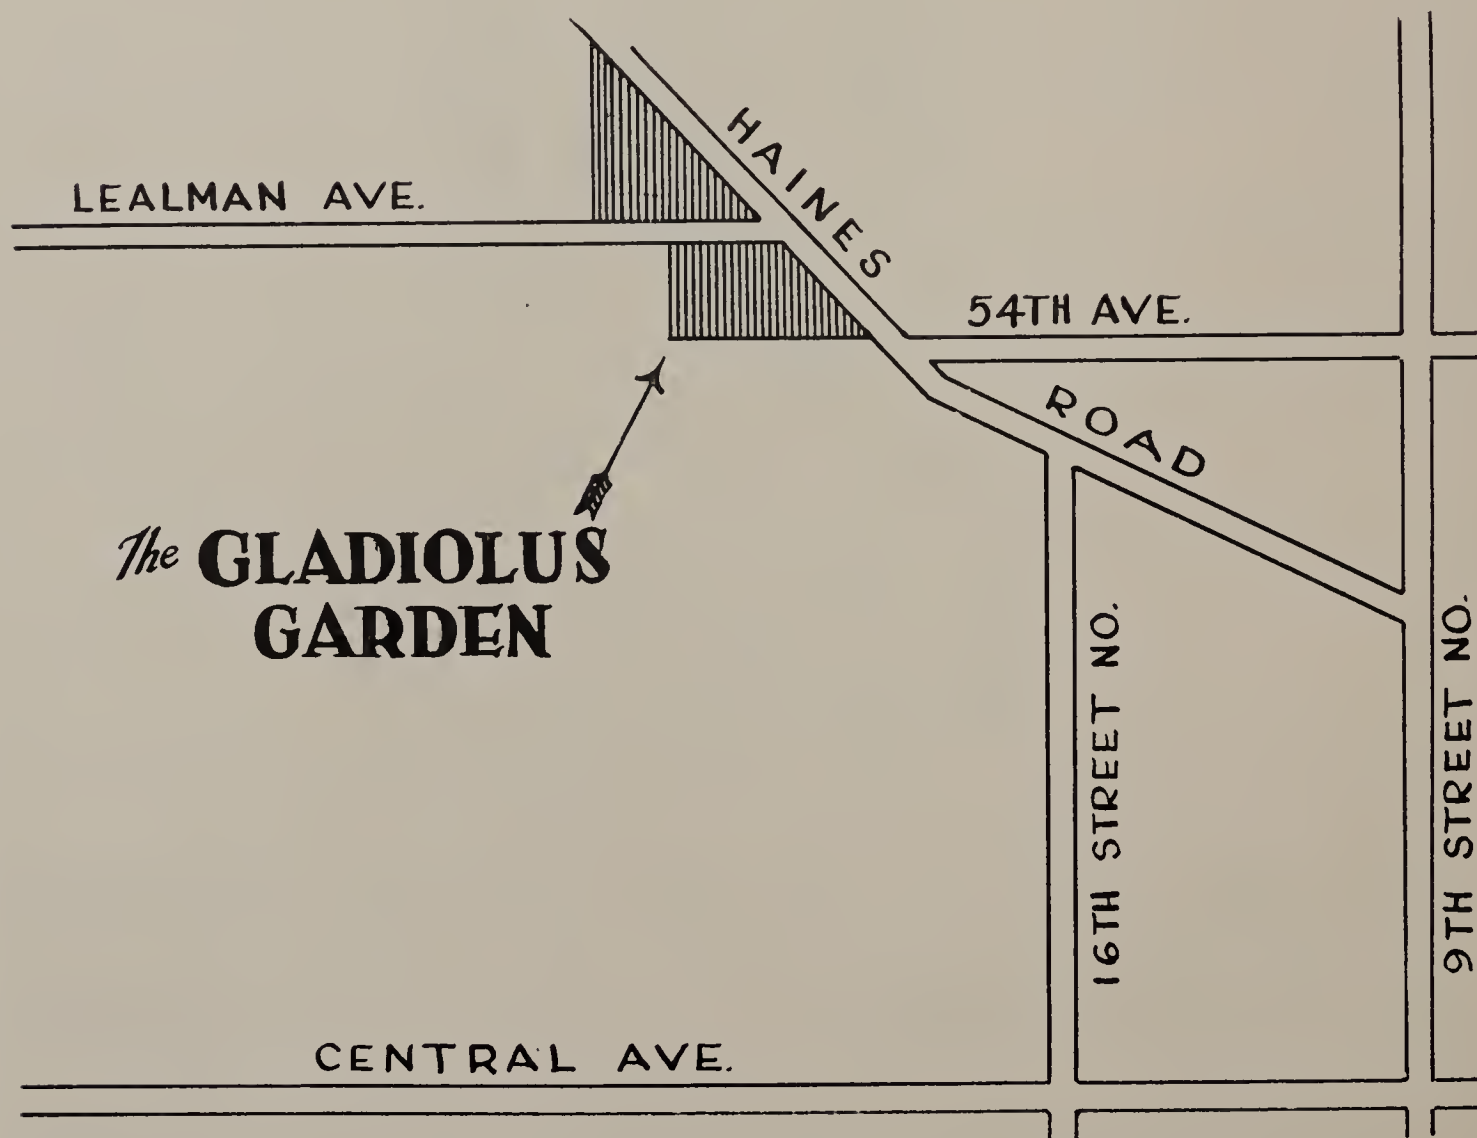

«FOREWORD»

IN RESPONSE to a request from several of our friends, we are putting out this list of the plants and products we deal in. It is not illustrated with expensive cuts because we feel that we would rather give you that much more value in the plants obtained from us. In fact, we are not intending that this shall be a complete catalogue, but rather a list to help and guide in the selection of the plants that you wish. To supplement this, we are ready at any time to help with advice and suggestions.

If you are interested in rare and unusual plants we will appreciate your inquiries, for we have many rare items in too small a quantity to list here.

The Nursery is located at the corner of the Haines road and Lealman Avenue. Follow Ninth Street North to Fifty-Fourth Avenue; then west to the Haines Road, and then north two blocks to SOULE'S GLADIOLUS GARDEN.

If you do not have a car you can reach the nursery on the Haines Road Municipal Bus which passes directly through the Nursery.

Flowering and Decorative Shrubs

All plants, bulbs, trees, and palms in this list have following the specific name, symbol letters that designate their relative hardiness at St. Petersburg, Florida. These symbols should be interpreted as follows: **H** means that the plants so marked are perfectly hardy here and most of them are hardy throughout the State; **ST** means semi-tender, plants so designated are hardy at St. Petersburg when planted where they are not exposed to the full sweep of north winds; **T** is applied to those plants which need planting in a protected place with a southern exposure; **TR** means tropical and plants so designated should be well covered or taken inside during all cool spells.

Perhaps in no place throughout the whole south is there any locality more blessed with such a wealth of plants which come under the heading of Flowering and Decorative Shrubs than our own. We are situated far enough south to be able to enjoy many of the tropical subjects and still not so far south but what most of the more hardy shrubs will thrive. We are particularly favored with a wealth of broad leaved evergreens which are much more suitable for this climate than evergreen conifers.

ACALYPHA, ST. Fine shrubs for foundation plantings or for massing where medium height is desired. Their wide range of colors makes them suitable for most any type of place. Some varieties are affected by cold weather but soon sprout up again if frozen. Most of them do best in full sun but will stand part shade. The colors are usually deepest during cool weather.

A. marginata, (*Copper Leaf*). Large strong grower. Leaves green, outlined with shades of red and pink.

A. mosaica, (*Fire Dragon*). One of the best where bright colors are wanted. Leaves mottled and attractively marked with several shades of green, yellow and red.

A. obovata. Similar to Marginata but with obovate leaves.

A. tricolor. (*Mandarin's Gown*). A tall strong grower similar to Mosaica but with more regular leaves colored mostly red.

	Each	Per Ten
All above varieties	3 in. \$.25	\$2.00
	4 in. .35	3.00
	6 in. .75	7.00
Boxed plants	1.00	9.00
Specimens	1.50 up	

A. hispida (*Chenille*). Quite tender. Very attractive with wide green leaves. The red tassel like flowers are often two feet long and hang down from the leaf axils. Strong 3 in., 50c; 4 in., 75c.

ACHANIA malvaviscus, ST. A small Turk's Cap of dwarf habit and with much prettier bright red flowers than the common Turk's Cap. Small plants, 25c; larger, 50c.

ALLAMANDA nerifolia, ST, (*Bush Alamanda*). A medium sized shrub with bright yellow flowers similar to but smaller than *A. Hendersoni*. Leaves glossy green.

	Each	Per Ten
4 in.	\$.35	\$ 3.00
6 in.	.50	4.50
Boxes	1.25	11.25

ARALIA Guilfoylei, T. A fine aristocratic foliage plant that lends itself to a variety of uses. The beautiful foliage is outlined with white or cream and the leaves are sometimes varied in shape so as to make it especially attractive. It is a fast strong grower but easily kept in bounds by judicious shearing. Where sufficiently protected it makes a fine hedge.

A. Balfouri. Very similar to *Guilfoylei*, except that the leaves are quite round.

	Each	Per Ten
Both Species	4 in. \$.50	\$ 4.50
	6 in. .75	7.00
Boxed Plants	1.25	11.25
Specimens	5.00 and up	

ARDISIA crenulata, H. A beautiful plant with handsome dark green foliage. Of particular value for its big clusters of bright red berries borne at Christmas time. The berries hold on for several months. Quite subject to root knot and should be planted in a very shady place with quite acid soil. It is best used as a pot plant.

	Each	Per Ten
4 in.	\$.35	\$3.00
5 in.	.50	4.50
6 in.	.75	7.00

ASCLEPIAS SP, H. (*Butterfly Bush*). A very good small shrub of the milkweed family which has been successfully used here for small hedges. Blooms yellow and orange. Strong 4 in., 25c; Boxes 75c.

ASSONIA Wallichii, T, (*Pink Ball*). A large shrub or small tree with large cordate leaves. The flowers are borne in large clusters, pink in color, in December.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00
Boxes	1.00	

BELLAPERONE guttata, ST. The curious red and white blooms resemble somewhat the bloom of hops. An odd but beautiful plant. Requires some shade. 4 in., 35c; 6 in., 75c.

BUDDLEIA lindleyana, H, (*Butterfly Shrub*). A most attractive shrub with spreading pendulous branches bearing long spikes of rosy lavender blooms suitable for cutting, from April to November. Seems to do best here in a light soil and with a little shade.

	Each	Per Ten
3 in.	\$.35	\$ 3.00
4 in.	.50	4.50
Boxes	1.25	11.25

B. madagascariensis, ST, (*Yellow Butterfly Bush*). A very fast growing scandent shrub with light green leaves which are silver underneath. Long panicles of yellow flowers are borne in the spring. Not common. 4 in., 50c; boxes, \$1.00; specimens, \$2.00 up.

CAESALPINIA gilliesii, ST, (*Bird of Paradise Shrub*). A shrub with fine pinnate light grey green leaves. Its chief attraction is in the red and yellow blooms which have long protruding stamens.

C. pulcherrima, ST, (*Dwarf Poinciana*). Fine shrub five to six feet high with light green pinnate foliage similar to the Royal Poinciana, but smaller. The beautiful red and yellow flowers give the appearance of being all red. Flowers borne at intervals throughout the year.

C. pulcherrima flava. A yellow flowered form of the preceding.

	Each	Per Ten
All Species 4 in.	\$.25	\$2.00
6 in.	.50	4.50
Boxes	1.00	

CALLISTEMON leucadendron, H, (*Weeping Bottle Brush*). A tall shrub with pendulous branches. Blooms shaped like a bottle brush, are borne on the ends of the branches several times a year. This is considered the most attractive of the bottle brushes we now have. Does not stand transplanting from open ground.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00
Boxes	1.00	9.00

CAMELLIA thea, H, (*Tea Plant*). An attractive small evergreen shrub bearing small white blooms in the leaf axils. Useful for mixing in mass plantings. 1 to 2 ft. high. B.&B. \$1.00 each.

CARISSA grandiflora, ST, (*Natal Plum*). One of our handsomest shrubs. Evergreen. The foliage is a dark, glossy green. Star shaped white blooms are borne at intervals throughout the spring and summer followed by beautiful red fruits about the size of a small plum with a very agreeable acid flavor. One of the few plants which is a fine decorative as well as a bearer of good edible fruit. It is also a fine protective hedge plant.

C. acuminata, ST, (*Hedge Thorn*). A small leaved species similar to the preceding but more suitable for small hedges.

	Each	Per Ten
Both species 4 in.	\$.50	\$4.50
6 in.	1.00	9.00

Prices on large specimens on application.

CASSIA alata, T. Tall shrub which is a strong, fast grower. It bears beautiful yellow blooms in the winter. Needs protection. Rare here.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.35	3.00
6 in.	.75	

CATHA edulis, St. Khat. Tall shrubs having red stems and glossy green leaves. The leaves are chewed as a stimulant by the Arabs. 4 in. 35c; 6 in. 75c.

CESTRUM diurnum, ST, (*Day Blooming Jessamine*). A tall upright fast growing shrub producing quantities of small white flowers throughout the year. Will stand some salt spray.

C. nocturnum, ST. (*Night Blooming Jessamine*). A rank, fast growing shrub with glossy green leaves. The masses of small greenish white tubular flowers borne at intervals throughout the year are intensely fragrant at night.

	Each	Per Ten
Both species 4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	

CHALCAS paniculata, ST, (*Orange Jessamine*). Beautiful shrubs reaching a height of ten feet. The leaves are small, compound and dark green. Blooms small and white with the fragrance of orange blossoms. Strong boxed plants, \$1.00 each.

CHRYSOBOLANUS icaco, T, (*Coco Plum*). This is one of the finest of the low shrubs with evergreen foliage for seaside planting. Does well but growth is slow in beach soil. The fruits are smooth, round and light purplish in color, with good flavor. 4 in., 50c; 6 in., 75c.

CLERODENDRON falax, T. A tall shrub of symmetrical shape, with large cordate leaves of pleasing dark green. The brilliant scarlet blooms are borne over a long period twice a year.

C. fragrans, T. Similar to the above but of much faster and softer growth. Blooms are round clusters of pearl white double flowers. Fragrance similar to Orange bloom but not so heavy.

	Each	Per Ten
Both species 4 in.	\$.35	\$3.00
6 in.	.50	
Boxes	1.00	

COCCULUS laurifolius, H. A broad leaved evergreen from the Himalayas which gives promise of being a shrub for mass plantings here. 4 in., 50c; 6 in., 75c.

COTONEASTER pannosa, H. A very fine shrub with delicate arching branches covered with greyish green foliage. Flowers white, followed by quantities of red berries. While there are many species of Coton-easters, this is the only one which has proven suitable here so far.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.75	
Boxes	1.00	
Tubbed specimens	2.00	

CRAPE MYRTLE, (*Lagerstroemia indica*), H. A very beautiful shrub which makes up for its deciduous qualities with its masses of gorgeous bloom, borne from spring to fall. Blooms have a wide range of color.

	Each	Per Ten
4 in.	\$.25	\$2.00
6 in.	.50	
Boxes	1.00	
Specimens in tubs	2.50	

CROTONS, T. These shrubs are one of the most popular of the tropical subjects. Their infinite variety of color and shape of leaf defies accurate description. While they do best in full sun, protected from strong winds, they will grow well in semi-shady situations. In addition to their beauty when planted in masses they are also of great value when used in tubs or ornamental vases on porches or in the conservatory and patio. These plants require plenty of rich soil and water. Our list of Crotons includes all of the commoner sorts as well as some of the rarest. Rather than try to describe them we invite you to come to our nursery. There you can see the largest collection in this part of Florida, at your leisure. Prices range from 35c each to \$40 each for rare specimens.

CUPHEA hyssopifolia, ST. The daintiest and best plant for small hedges and borders. Stands shearing well. Bears quantities of small lavender flowers throughout the year.

	Each	Per Ten
2½ in.	\$.15	\$1.40
3 in.	.25	2.00

DAEDALACANTHUS nervosus, ST, (*Blue Sage*). A medium sized shrub having good dark green leaves with prominent veins. In the winter this plant is covered with masses of fine heads of dark blue flowers.

	Each	Per Ten
4 in.	\$.25	\$2.00
6 in.	.50	4.50
Specimens in tubs	1.50	

DURANTA plumieri, H, (*Golden Dew Drop*). This is one of the best of the tall shrubs. The bloom is a delicate lilac, borne practically all the year, followed by masses of yellow fruits. It is often in bloom and fruit at the same time, the combination of colors making it most attractive. It lends itself to a wide variety of uses.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	
Specimens in tubs	3.00	

EUGENIA hookeriana, ST, (*Bush Cherry*). Very beautiful symmetrical shrubs or small trees suitable for a wide variety of uses. Fits well into any large mass planting, or can be sheared in time into very beautiful standards.

E. myrtifolia. Smaller and more compact than the preceding. This species makes fine hedges. It also makes even better standards than the preceding.

	Each	Per Ten
3 in.	\$.35	\$3.00
4 in.	.50	4.50
Specimens in tubs	5.00	
Sheared standards of Myrtifolia	\$20.00 per pair.	

EUGENIA uniflora, H. (*Surinam Cherry*). This species is not as tall a grower as the preceding two, but it makes a better natural bush. It can be used to good advantage as a hedge for it stands shearing well. The very pretty fruit resembles a cherry and are used for a variety of preserves and punches.

	Each	Per 10	Per 100
3 in.	\$.25	\$2.00	\$20.00
4 in.	.35	3.00	25.00
6 in.	.50	4.50	
Boxes	1.00		

ERYTHRINA crista-galli, T. A large shrub with compound leaves. Red blooms are borne in the spring. Sometimes called Coral Tree.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.50	
Boxes	1.00	

EUONYMUS, sp. H. One of the very finest low dark green border or edging plants. It also makes a fine specimen pot plant when sheared.

	Each	Per 10	Per 100
2 in.	\$.05	\$.45	\$4.00
4 in.	.50		
6 in.	1.00		

FEIJOA sellowiana, H. (*Pineapple Guava*). A medium sized shrub with beautiful grey green foliage. The white and purple flowers are borne in the spring. The fruits are said to ripen in the Fall, and are flavored like a pineapple. This shrub seems to grow well with us and should be used more. Tub, \$3.00.

GARDENIA Florida, H. (*Cape Jasmine*). A common shrub throughout the south. Its dark glossy green leaves are especially attractive. The wonderful large white waxy blooms are its chief attraction, however. Their perfume is second to none. This is the Gardenia of the Northern Florists that brings high prices. Should have a little shade and quite acid soil.

G. fortunei. A variety with narrower leaves.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.50	4.50
Boxes	1.50	
Tubs	2.50	

G. veitchii. The leaves of this variety are much smaller and the flower is a trifle smaller, but it gives promise of being an ever bloomer. Its main crop of bloom is much earlier than the Florida variety.

	Each	Per Ten
4 in.	\$.75	
6 in.	1.25	\$11.25

HIBISCUS rosa-sinensis, ST. Without this shrub, the South would lack much of its color. In its different forms it is probably the most common shrub, with the exception of the oleander. It is used singly, in groups for foundation work, and for hedges. Because of the fact that some varieties have become so common we are only propagating and listing those which we have the most call for. We have some new varieties under propagation now, which we hope to release next summer.

Prices for Common Varieties		Rare Varieties	
Each	Per Ten	Each	
4 in. \$.25	\$2.00	4 in. \$.50	
6 in. .35	3.00	6 in. .75	
Boxes, 75c; Large Field Grown, \$1.00 and \$1.50.			

HOLMSKIOLDIA sanguinea, ST. This new shrub is from the Himalayas. While its general habit is that of scandent shrub, it can be trained to a small upright shrub. The leaves are light green. The flowers, shaped like a mandarin hat, are orange with a little red in the center. A pretty and odd flower on a pretty shrub.

	Each	Per Ten
4 in. \$.50		\$4.50
6 in. 1.00		9.00

ILLICIUM anisatum, H. (Anise). A large broad leaved evergreen. Foliage is aromatic, when bruised. Fine for use in large mass plantings. Large plants, \$2.50 to \$5.00.

ILEX Cornuta, H, (Japanese Holly). One of the most beautiful of the Hollies. The leaves appear square with sharp points on the corners. Large plants, \$3.00.

I. VOMITORIA, H, (Yaupon). A dense growing shrub or small tree, bearing fine red berries in winter. Stands shearing and may be used for specimens or standards. Large plants, \$4.00. Sheared plants, \$4.00 to \$5.00.

IXORA incarnata, ST, (Flame of the Woods). Rightly named for when in full bloom the foliage is almost hidden by the brilliant heads of red bloom. Does best with a little shade, preferably on the south side. Also a good tub plant for northern conservatories.

	Each	Per Ten
4 in. \$.50		\$4.50
6 in. .75		
Boxes	1.50	
Tubs	2.00 up	

JACOBINIA coccinea, T, (*Cardinal's Guard*). Upright shrub to five feet. Foliage glossy green. Bright red flowers in terminal spikes. Everbloomer. Grows well in damp ground.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	
Boxes	1.00	
Tubs	2.00	

1. JASMINUM Floridum, H. An upright growing shrub with heavier leaves than Prinulinum and with yellow flowers.

2. J. gracillimum, H, (*Star Jasmine*). A scandent shrub, used either as a vine or shrub. Periodically covered with white bloom, very attractive.

3. J. humile, H. Quite like Floridum but a tall shrub.

4. J. officinale, H. A scandent shrub, similar to Gracillimum, but with darker leaves and a more twining growth.

5. J. simplicifolium. A climbing jasminum with pretty pinkish white star shaped bloom having pointed petals.

All above varieties—

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	9.00
Tubs	1.50	

JASMINUM sambac, T, (*Grand Duke*). An upright shrub with very double and intensely fragrant bloom.

JASMINUM, T. (*Maid of Orleans*). Leaves like the above variety but the plant is inclined to be a vine. Blooms semi-double or single. Each, both varieties: 3 in., 35c; 4 in., 50c.

JATROPHA multifida, T, (*Coral Plant, or Physic Nut*). An attractive herbaceous shrub with deeply cut 7 to 11 parted leaves. Bloom scarlet, borne throughout the year on old plants. Needs some protection during cold weather here.

	Each	Per Ten
3 in.	\$.35	\$3.00
4 in.	.50	
6 in.	1.00	

LAGERSTRÆMIA flos-reginae, T, (*Queen Crepe Myrtle*). This crepe myrtle once seen in bloom is never to be forgotten. The blooms are much larger than the common types, and are lavender in color. It probably needs protection here. Rare. Seedlings, 50c each.

LAUROCERASUS Caroliniana, H, (*Laurel Cherry*). A very beautiful large shrub or small tree. One of the best native broadleaved evergreens. Slow grower. Foliage dark glossy green. Makes fine hedges or sheared specimens.

	Each	Per Ten
4 in.	\$.35	\$3.00
Boxes	1.00	
Tubbed specimens	5.00	
	From open ground, 2 to 3 ft.	\$2.00
	3 to 4 ft.	3.00
	4 to 5 ft.	4.00
	5 to 6 ft.	5.00

LANTANA, H. A fine plant for all of Florida. Its best use is for hedges or for large mass planting. Will grow in poor soil but does much better if given some care, and frequent spraying. Wide range of colors.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.35	3.00
6 in.	.50	4.50
Field plants up to	1.00	

LAWSONIA inermis, ST, (*Camphire of Solomon*). An upright shrub that should be more used. The foliage is light in color and the blooms are creamy white coming several times a year. Especially suitable for light soils. Bloom delicately fragrant.

L. rubra. Same as the preceding but with reddish flowers. Both varieties have a delightful fragrance.

Each	Per Ten

LEONOTIS Leonurus, ST, (*Lion's Tail*). A fast growing soft shrub that gives good promise if used in rich, moist soil. The blooms borne toward the ends of the branches, are orange in color and give the effect of the tuft on a lion's tail, whence the name. Each Per Ten

Each	Per Ten
3 in. \$.25	\$2.00
4 in. .35	
6 in. .50	

LIGUSTRUM iwata. A smaller leaved variety that has a very slight variegation in the leaf.

L. lucidum, H. (*Wax Privet*). Probably the most attractive of all the shrubs for foundation planting. Its broad evergreen leaves are a very dark, shining green, and give a very rich effect. It can also be used for specimen plants or for hedges. Freedom from insect pests is another of its valuable assets. Can be sheared to shape.

L. nobilis, H. Very similar to *Lucidum*, except that it is a tall growing variety suitable for backgrounds and for corners where a tall effect is desired.

Above three varieties—	Each	Per Ten
18 to 24 in.	\$.75	\$ 7.00
24 to 36 in.	2.00	18.00
3 to 4 ft.	3.00	
4 to 5 ft.	4.00	

L. coriaceum, H. A dwarf *Ligustrum* with curiously twisted leaves. A much slower grower than the others. 12 to 18 in., \$1.50.

L. gracilis. Also similar to *Lucidum* but with recurved branches which have a very graceful appearance. All of the above, 2 to 3 ft., \$1.50; 3 to 4 ft., \$2.00.

L. excelsium superbum, H. Tall and upright growing with light green variegated leaves. A very desirable shrub where light color is wanted. 3 to 4 ft., \$1.50.

MICHELIA fuscata, H, (*Banana Shrub*). An old favorite throughout the South. A medium sized compact shrub with dark glossy green foliage similar to the big magnolia but smaller. The blooms are yellowish brown with a delicate perfume which resembles that of a banana, and are borne from March to May. This makes an especially good specimen plant. 2 to 3 ft., \$2.00.

MALPIGHIA coccigera, ST. A very beautiful, dainty, small shrub with small leaves resembling holly. The blooms are pinkish white followed by red berries. Makes a fine base planting.

	Each	Per Ten
3 in.	\$.35	\$3.00
4 in.	.50	

MYRTUS communis, H, (*Sweet Myrtle*). A small erect shrub with fine dark foliage. It has a wide variety of uses. Stands shearing well and may be used for small specimen plants or for small hedges.

	Each	Per Ten
3 in.	\$.25	\$2.00
6 in.	.75	

MYRICA cerifera, H, (*Wax Myrtle*). One of the most attractive natives. It is a large evergreen shrub or small tree that stands shearing. For large mass planting it is especially fine. Can also be used for hedges or screens. The foliage is a beautiful shining bronze green and has a very agreeable odor. Bushy field plants, 2 to 4 ft., \$2.00 each.

NANDINA domestica, H, (*Nandina or Heavenly Bamboo*). An upright shrub with fine feathery foliage, light green in color, turning fire red during cold weather. The red berries are borne in the winter. Each: 12 to 15 in., tubbed, \$2.00; 18 to 24 in., tubbed, \$3.00.

OLEANDER, (nerium), H, (*Oleander*). This beautiful shrub is the most outstanding plant of the south. Its uses are so varied that it is hard to find a place on which it cannot be used. The colors range from pure white to red. We have limited our stock to those varieties which are the most floriferous. Colors other than those listed can be obtained at any time.

CARNEUM. A single flesh color. Very floriferous.

MADONNA. Double pure white.

SPLENDENS.	Double rosy pink.	Each	Per Ten
	Above—	4 in. \$.25	\$2.00
		6 in. .35	3.00
	Field grown, 50c to	\$1.00	

OLEANDER, *variegata*, Double pink, blooms the same as Splendens but the foliage beautifully variegated cream and green.

(Mrs. Roeding), the prettiest of all. A fine large double flower with a subtle blending of pink, cream and salmon. Each	Per Ten
Both above—	\$3.00
4 in.	\$.35
6 in.	.50
Boxes	1.00

OSMANTHUS fragrans, H, (*Tea Olive*). A beautiful evergreen upright shrub with small delightfully fragrant blooms creamy white in color. The fragrance is reminiscent of almonds. 2 to 3 ft., \$2.00.

PANAX aureum, T. Very decorative plants, similar to Aralia. Leaves variously cut and divided and of a yellowish tone.

P. excelsum. Foliage very finely cut.

P. plumatum. Foliage grey and white.

P. victoriae. Foliage green and white, dwarf and tender. All varieties small plants, 50c; strong larger plants, \$1.00.

PHOTINIA serrulata, H. A very beautiful holly-like shrub. The leaves are dark green and shiny above and lighter beneath, turning reddish in cool weather. The red berries ripen in the winter, adding to its attractiveness. It makes fine mass plantings. Each: 18 to 24 in., \$2.50; 2 to 3 ft., \$3.00.

PITTOSPORUM tobira, H. This hard woody shrub has a great variety of uses with us. It makes a good hedge or it can be used in masses. The leaves are thick and leathery and dark shiny green, growing in clusters at the ends of the stems. The blooms which are borne in March are small creamy white and fragrant. This plant will stand some salt spray and is useful for seaside planting.

4 in.	\$.50	\$4.00
6 in.	.75	7.00
Field grown plants \$1.00 to \$4.00	Boxes 1.50	

PHYLLANTHUS nivosus roseopictus, ST, (*Jacob's Coat*). Beautiful upright shrubs with alternate branches giving a zigzag effect. Leaves flushed with white and pink above, darker below. A good plant where some color is desired. Does very well in some shade.

P. n. atropurpureus. Similar to the above but with dark purplish foliage. Makes a very rich effect against a light wall. Small plants, 25c; 4 in., 50c; 6 in., 75c; boxes, \$1.25; tubs, \$1.50 up.

PLUMBAGO capensis, H, (*Blue Leadwort*). A very fine small light green shrub which is covered with beautiful sky blue blooms almost all the year.

P. capensis alba. The same except for its white blooms.

	Each	Per Ten
Small plants	\$.25	
4 in.	.35	\$3.00
6 in.	.60	5.00
Boxes	1.00	

PODOCARPUS sinensis maki, H. Smaller leaved form which makes fine sheared specimens. Sheared, in tubs, \$5.00.

P. elongatus, H. A species with fine feathery leaves and drooping branches giving the effect of a weeping willow. 4 in., 75c; 6 in., \$1.00; boxes, \$2.00 to \$3.00; tubs, \$5.00 to \$10.00.

POINSETTIA (Euphorbia pulcherrima), ST. This plant is the one so much used by northern florists for decoration at Christmas time. The larger bracts turn brilliant red early in December and stay that way for a long time. Single red, 4 in., 25c; 6 in., 50c.

(*Double Red*). Somewhat darker with double the number of bracts.

(*White*). Bracts are Cream.

4 in., 50c; 6 in., \$1.00

POMEGRANATE (Punica granatum), H. A large shrub with light green leaves. Flowers in the spring with a beautiful red blossom, fruit large and crisp. Makes a fine drink.

POMEGRANATE dwarf. A low growing species which makes fine borders or very small hedges. Flowers more orange than red.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.35	3.00
6 in.	.50	
Tubs	1.50	

PYRACANTHA crenulata, H, (*Evergreen Hawthorn*). A good shrub suitable for massing. Has dark green foliage and masses of red berries in the winter. 3 in., 25c; 4 in., 50c; 6 in., \$1.00.

RAPHIOLEPIS indica, H. (*Indian Hawthorne*). A slow and low growing shrub with very dark, heavy, thick leaves. Flowers light pink and fragrant.

R. japonica. Similar but larger and faster growing. The large panicles of pinkish white are white and fragrant and are suitable for cutting. 4 in., 50c; 6 in., \$1.00; boxes, \$1.50.

SCHINUS terebinthifolius, H. (*Brazilian Pepper*). A large shrub or small tree with good dark green foliage. In the Fall it is covered with bright red berries, which hold on for a long time. It is fast growing and because of this it is used in place of holly. While a good subject for large hedges, its best use is for backgrounds. Stands shearing.

	Each	Per 10	Per 100

Field grown, \$2.00 up

SERISSA foetida, H. A very fine small hedge plant with cream and green leaves, and small white flowers. If not sheared too hard it will grow about 15 inches high.

	Each	Per Ten
3 in.	\$.15	\$1.40
4 in.	.25	2.00

SEVERINIA buxifolia, H. A dwarf shrub with dark green small foliage. This shrub is very fine for hedges or for facing down large plantings. Stands shearing and grows slow. 3 in., 35c; 4 in., 50c; 6 in., 75c, per ten, \$7.00. Field grown, 12 to 18 in., \$2.00.

STENOLOBIUM sambucifolia, ST. (*Yellow Elder*). One of our most beautiful yellow flowering shrubs. Foliage light green. Flowers borne in masses in the winter and again in the summer. 3 in., 25c; 4 in., 50c; boxes, \$1.00; tubs, \$2.50.

STROBILANTHES isophyllus, ST. (*Hedge Flower*). A soft growing herbaceous plant which produces petunia like soft bluish blooms at intervals throughout the year. A good subject which should be used more. 3 in., 25c; 4 in., 35c; 6 in., 50c. Box, 75c.

S. anisophyllus, (*Lavender Bell*). Similar to the last but smaller and producing more blooms in the winter and spring. Very floriferous. 3 in., 25c; 4 in., 50c.

S. dyerianus. A species with broad shiny purple leaves. Very showy. 3 in., 25c; 4 in., 35c.

TABERNÆMONTANA coronaria flore-pleno, H. (*Crape Jessamine*). A fine tall upright shrub with dark glossy leaves somewhat similar to a Gardenia. The blooms are pure white and double and are borne periodically throughout the year. Fragrant at night.

T. grandiflora. Similar to the above but with much larger leaves and not quite so many flowers. Makes a fine shrub for mass plantings. 3 in., 25c; 4 in., 35c; 6 in., 75c; boxes, \$1.00.

TAEVERNÆMONTANA cashmere, ST, (*Pinwheel Flower*). Similar to the last two but with smaller foliage and with very attractive single wheel shaped white blooms. The most attractive of all. 3 in., 50c; 6 in., \$1.00.

TETRAPANAX papyrifera, ST, (*Rice Paper Plant*). A very tropical appearing plant with large palmate leaves which are silvery beneath. It grows eight to ten feet high and early in the winter puts out large plumes of white bloom which are very striking. Suitable for patios. Likes some shade. 4 in., 50c; 6 in., \$1.00; boxes, \$1.50.

THEVETIA nerifolia, T, (*Tiger Apple*). A tall shrub with narrow foliage bearing tubular orange blooms throughout the year. Blooms have slight fragrance similar to listerine. Odd shaped fruits called lucky stones. 4 in., 35c; 6 in., 50c; boxes, \$1.00; tubs, \$2.50.

THRYALLIS Braziliensis, H. A comparatively new plant to us. It is semi-upright in habit and is a mass of bright yellow bloom most of the year. Good for cut flowers. Can be used for massing or for base planting. 4 in., 35c; 6 in., 50c.

TIBOUCHINA semidecandra, T, (*Princess Flower*). A tall straggling shrub which is at its best in a large planting. The foliage is soft and velvety and of bronze green color. The bloom is deep royal purple and is about three inches across. 4 in., 50c; 6 in., 75c; boxes, \$1.00.

TURK'S CAP (malvaviscus arboreus), T. A very useful shrub which makes a fine hedge or screen. Bears quantities of bright red blooms throughout the year.

	Each	Per Ten
4 in.	\$.25	\$2.25
6 in.	.35	3.00

TURK'S CAP (malvaviscus a.) pink. A rare form having shell pink blooms. Very attractive. 3 in., 75c; 4 in., \$1.00; 6 in., \$1.50.

VIBURNUM odoratissimum, H. A broad leaved evergreen shrub which is indispensable in large mass plantings. It attains a height of ten feet and is of good color to blend with other shrubs. Fragrant spikes of white bloom are borne in the spring.

V. suspensum, H. A spreading shrub having large dark green leaves with crenulate edges. The growth is somewhat slower than the last.

Prices both species—	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00

Field grown, 2 to 3 feet, \$2.00

Field grown, 3 to 4 feet, \$3.50

VITEX agnus-castus, H, (*Lavender Shrub*). A large shrub or small tree with soft palmate leaves. During the summer and into the fall the branches are terminated with bright blue spikes. Resembles a buddleia. Suitable for cutting. 4 in., 25c; 6 in., 50c. Field grown, \$1.00 up.

Flowering, Shade and Decorative Trees

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

ACACIA longifolia, H, (*Sydney Golden Wattle*). A fine shrub or small tree. Leaves very long lanceolate, dark green. Flowers large yellow, profusely borne in the leaf axils. Suitable for cutting. 4 in. pots, 50c; \$4.50 per 10.

We also carry the following Acacias in small amounts at the same prices as the last species: dealbata, baileyana, farnesiana, saligna, floribunda, and cyanophylla. Others will be added as they prove suitable here.

ALBIZZIA lebbek, H, (*Woman's Tongue Tree*). A fine broad-topped tree with pinnate leaves. The fragrant whitish and cream flowers are borne in profusion in the spring and summer. This is a good street tree.

A. julibrissin, H. Similar to the above but with blooms borne in large clusters and pink in color. Deciduous.

A. julibrissin rosea, H. Similar to the preceding but the pink blooms are borne on longer stems and in greater profusion. In addition they are more fragrant. A showier and better tree for this section.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.35	3.00
6 in.	.75	7.00

ALEURITES moluccana, T, (*Candlenut*). A tall broad leaved shade tree with light green leaves which are brownish pubescent below. Flowers creamy white in cymes, borne in the spring. A good shade and street tree.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00

ARAUCARIA bidwilli, H, (*Bunya-Bunya Pine*). Sometimes called locally *Monkey Puzzle*. A Tall, cylindrical, rounded topped tree. Foliage is dark glossy green on pendulous branches. This is the strongest growing of the Araucarias here.

A. cunninghami, H, (*Moreton Bay Pine*). Leaves light blue green and more needle-like than the preceding. Both above species, 4 in., \$1.50; 6 in., \$2.50.

A. excelsa, H, (*Norfolk Island Pine*). The most beautiful and symmetrical of the Araucarias. The branches are arranged in very symmetrical whorls. This makes a fine pot plant when small. 5 in., \$2.50; tubs, \$5.00 up.

BAUHINIA alba, ST. This is an attractive white flowered form of the next variety.

B. purpurea, H, (*Mountain Ebony*). A fine decorative tree which is covered early in the spring with rosy purple orchid-like blooms. This tree is deciduous. The flowers usually appear before the leaves and stay on until the leaves are started.

B. acuminata, H. This fine plant should be included in the shrubs for it is more of a shrub than a tree. The blooms are white and are borne in the late summer and fall.

All Species—	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.50	4.50
6 in.	.75	7.00
Boxes	1.50	
Specimens in tubs	2.50 to \$5.00	

BARYXLUM inerme, T, (*Yellow Royal Poinciana*). This tree grows somewhat similar to the Royal Poinciana but it is not as broad and flat topped. The foliage is much darker and pubescent. Blooms produced early in the spring in large spikes of yellow. Boxes \$2.00.

CASSIA fistula, ST, (*Golden Shower*). When in full bloom there is no yellow flowered tree the equal of this one. The growth is fast. The flowers are borne early in the spring and are produced in great pendulous masses. A fine tree for street planting.

C. grandis, T, (*Pink Shower*). Similar to the last but the blooms are pink and the foliage is darker and tomentose.

C. tomentosa, T. Very similar to the last but the blooms are yellow.

C. nodosa, T, (*Pink Shower*). This species bears masses of pink, rose scented flowers in the spring and early summer. Next to fistula this is perhaps the showiest of all the Cassias known here.

All above species—	Each	Per Ten
4 in.	\$.75	\$7.00
6 in.	1.50	

C. beariana, ST. A large round topped tree bearing long spikes of yellow bloom in the early spring. Small plants 35c.

CASTANOSPERMUM Australe, H, (*Moreton Bay Chestnut*). One of the finest evergreen shade trees. The orange blooms, about an inch across, are borne in May and June. This tree will be much in use for street planting when better known. Each: 4 in., 75c; per ten, \$7.00.

CASUARINA cunninghamiana, H, (*Australian Pine or Beefwood*). This species is cold resistant and is most adapted to inland planting. Can be used for streets, hedges, large windbreaks or for single specimens.

C. equisetifolia, ST. This species is the best for use near salt water, as it will stand some salt spray. Extremely high tides will sometimes deposit enough salt to injure it if the salt is not washed out with fresh water within the next day or two.

	Each	Per 10	Per 100	Per 1000
2½ & 3 in.	\$.10	\$.90	\$ 8.50	\$ 80.00

6 in.	.35	3.00		
Field grown, 4 to 5 ft., \$1.50 each				

CERATONIA siliqua, ST, (*St. John's Bread or Carob Tree*). A good tree of broad rounded shape. The red flowers are borne in racemes. Leaves pinnate and shining dark green. Fruit is an edible pod. Mention of this tree is found many times in Biblical history. Rare here. Small plants, 50c each.

CINNAMOMUM camphora, H, (*Camphor Tree*). A good broad topped evergreen tree for street or roadside planting. It also makes good specimen trees or large unsheared hedges. The leaves are light green and shining.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	
Specimens in tubs	3.00 up	

CRESCENTIA alata, ST, (*Calabash Tree*). A rather open headed small tree. The attractive blooms are borne along the main stems. The fruit is a large light green gourd-like pod which is often used for utensils. Fruit can be grown into a number of odd shapes by skillfully tying with twine while it is forming. Rare here. Small plants, 35c each.

COUROUPITA guianensis, ST, (*Cannon Ball Tree*). A tall soft wooded tree from Guiana. Usually planted as a curiosity, although it is a fairly good shade tree. Flowers large, often six to eight inches across, with yellow and red on the outside and lilac inside. Fruit a reddish ball 6 to 8 inches in diameter, with a very hard shell. Boxed plants \$2.00 each.

EUCALYPTUS All the species listed here are hardy here. This is a large family of trees which are largely used where a quick fast growth is desired. We list only those that have proven good growers here.

E. globulus, (*Blue Gum*). Attractive blue green leaves when young. Makes a large tree here. Requires well drained soil.

E. robusta, (*Swamp Mahogany*). Smooth light colored bark. Leaves long pointed and dark green. Likes moist soil.

E. rudis, (*Desert Gum*). This variety stands cold situations best.

E. rostrata, (*Red Gum*). One of the largest and hardiest. Good timber tree.

E. sideroxylon rosea, (*Red Flowering Gum*). A good variety that gives promise here. It's red bloom is especially fine. When in full bloom the tree is a mass of red color.

All varieties: 3 in., 25c; 4 in., 50c.

FICUS, ST, (*Rubber Tree*). Most species are more or less tender but do not seem to be seriously injured here. Among them are some of our most beautiful shade and street trees. Most of the large leaved varieties are not suitable for planting on small grounds and for that reason we do not list them. However, we can get them when customers so desire. The huge buttressed roots of the large varieties have a bad habit of raising sidewalks, pavements and even houses out of plumb. The following varieties do not have that characteristic.

F. nitida, ST, (*Laurel Leaved Rubber*). A very beautiful small leaved species suitable for large specimens. It can also be used for screens and large hedges. Stands shearing well.

F. benjamini, T, (*Weeping Rubber*). The most beautiful of all. A most excellent specimen tree for shade purposes. This also makes a fine street tree.

Both of the above species: 4 in., 50c each; 6 in., 75c each; boxes, \$1.00; specimens in tubs, \$3.00 and up.

F. pandurata, T, (*Banjo Leaved Rubber*). The most tropical appearing species with leaves often two feet long. When small makes fine tub plants for the conservatory or patio. 6 in., \$2.50 each; tubs, \$3.00 and up.

GREVILLEA robusta, H, (*Australian Silk Oak*). A very fast growing shade tree which reaches a large size here. The leaves are finely cut and give a fern like appearance. Small plants make fine subjects for window boxes for one season. The blooms are borne in the spring in large trusses and are a beautiful orange color.

Field grown, 3 to 4 ft.,	\$4.00	

Why not organize a neighborhood club for the beautification of parkways in your locality?

Palms and Cycads

Palms to most all of us, suggest the Tropics. They lend an atmosphere to be obtained with no other plants. While we are situated at the northern growth limit of some species many of them can be successfully grown here with a little understanding care and protection. There is a great deal of satisfaction in growing beautiful plants, like the palms, out of their natural climate and when more people realize this we will have many more rare palms here.

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

CYCAS circinalis, T, (*Queen Sago Palm*). While this plant is called a palm by most every one, it is not one and should not be so called. It is the most beautiful of the Cycads which we have here now. The long feathery leaves arch out gracefully from a common center giving the appearance of an immense inverted feather duster from which the center has been removed. Small plants \$2.50. Specimens in tubs, \$8.00 and up.

C. revoluta, H, (*Sago Palm*). This is the Cycad which is most common here. Its growth is similar to the last though the leaves are very stiff and much darker green. 4 in., 75c; 6 in., \$1.25.

ARCHONTOPHOENIX Alexandrae, ST. A beautiful palm with a smooth straight trunk similar to *Seaforthia* but with wider leaves which are silvery underneath. Very suitable for use in tubs on porches and in patios. 4 in., 50c; 6 in., \$1.00; tubbed specimens, \$5.00.

ARECA lutescens, ST, (*Golden Stemmed Palm*). One of the best of the lower growing palms for home decoration. Suckers spring up freely from the base making it especially suitable for massing around a house. The gracefully arched leaves on golden yellow stems make it very attractive. It is especially adapted also for use in ornamental pots and tubs. Should not be in full sun.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00

Tubbed specimens from \$3.00 to \$15.00

CARLUDOVICA palmata, T, (*Panama Hat Palm*). This is not a true palm but is called one because of its appearance. A very decorative subject suitable for pot culture or for shady patios. Height about five feet at maturity. 4 in., \$1.00; 6 in., \$1.50.

CARYOTA urens, T, (*Fish Tail Palm*). A very beautiful and tropical appearing palm. It does not stand much cold weather and should be planted in a sheltered place. The leaves are peculiarly shaped and cut to resemble a fish's tail, hence the name. Should be used more.

	Each	Per Ten
4 in.	\$1.00	\$ 9.00
6 in.	1.50	13.50

Tubbed Specimens, \$3.00 to \$15.00

COCOS Australis, H. A slow growing dwarf palm with blue grey leaves that recurve in a very graceful way. One of the handsomest of the low growing palms. It is adapted to use on lawns or parkways but also makes a fine tubbed specimen.

	Each	Per Ten
Field grown, 1 to 2 ft.	\$1.50	\$13.50
2 to 3 ft.	2.00	18.00
3 to 4 ft.	4.00	36.00
Tubbed specimens, \$2.50 up		

CHAMÆDOREA elegans, T. A beautiful dwarf palm with pinnate leaves. Suitable for pots and urns. Rather rare here. 4 in., \$1.50 each.

COCOS nucifera, ST, (*Cocoanut*). This palm probably excites more comment than any other except perhaps the Royal Palm. Its very long sweeping leaves are extremely graceful and beautiful. Warm moist situations suit this palm best although it can be grown on high ground if properly handled. Because it will thrive with its roots almost in salt water it is the most practicable palm for seaside plantings. Small specimens 4 to 5 feet high in tubs \$5.00. Field grown specimens 3 to 4 feet, \$3.00. Large specimens at any price up to \$30.00.

COCOS plumosa, H, (*Plumy Palm*). The most practicable and most used palm here. It is faster growing than most of our other palms. As a palm for streets and parkways it has few equals and is also fine for use throughout the home grounds. The tall straight smooth grey trunk contrasts well with the long sweeping dark green leaves. Does best in a rich soil.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.50	4.50
6 in.	1.00	9.00
Tubbed specimens, \$3.00 to \$7.50

Field grown, 4 to 5 ft., \$2.50 each		
Field grown, 5 to 6 ft., \$3.50 each		
Field grown specimens up to \$20.00		

CORYPHA Australis, H. A slow growing fan palm resembling a *Thrinax*. Nice specimens in tubs, \$5.00.

DICTYOSPERMA rubra, ST. This palm has a slender ringed stem. Leaves pinnately cut with some red color on the margins and veins. Young plants make fine table decorations. Small plants, 25c.

HETEROSPATHE elata, T, (*Sagisi Palm*). One of the rarer and little known palms. The grace of its beautiful arching pinnate leaves makes it a very fine conservatory plant. When better known it will be much used for hotel and other inside decoration, because of its ability to stand heavy shade. 3 in., 50c; 4 in., \$1.00; 6 in., \$2.00. Small tubs, \$5.00 each.

KENTIA belmoreana, ST, (*Kentia*). The most satisfactory palm for indoor decoration. It can also be used out of doors here if in a shady protected place. The arching leaves are a rich black green. This is the palm most used by the northern florists for all decoration work. It is an exceptionally fine palm for hotel decoration. 4 in., \$1.00; 6 in., \$2.50. Tubbed plants, \$3.00 to \$7.50.

LIVISTONA chinensis, H. (*Fan Palm*). A very good dwarf fan palm. Its rounded, shining flat leaves are quite attractive. This palm is also good for inside work in hotels, for it will stand considerable abuse. Makes good tubbed specimens or may be planted out in the lawn where a low subject is wanted. 4 in., 75c; 6 in., \$1.50. Tubs, \$2.00 to \$5.00.

LIVISTONA rotundifolia, T. This small slow growing fan palm is much smaller than the preceding. The leaves are quite round. This palm must be seen to be appreciated. 4 in., \$1.50; 6 in., \$2.50. Small tubs, \$3.00.

PHOENIX canariensis, H. (*Canary Island Date Palm*). A very hardy palm of large size. The large trunk is topped with a dense crown of very long graceful leaves. One of the best palms for cool situations. It is well adapted to street planting.

Each	Per Ten
------	---------

	Each	Per Ten
4 in.	\$.25	\$2.00
6 in.	.75	7.00

Tubs, \$2.50 to \$10.00 each
Field grown, 1 to 2 ft., \$1.25
Field grown, 2 to 3 ft., \$2.00

P. reclinata, H. When well grown this fine cluster palm is one of the prettiest of the Date palms. In old plants the long dark green leaves recurve so as to almost completely hide the stems. It can also be grown as a single stem palm by removing the suckers for the first few years. It is most effective though when allowed to grow naturally. 6 in., \$1.00. Small tubs, \$2.50 to \$3.50. Field grown: 3 to 4 ft., \$3.00; 4 to 5 ft., \$4.00.

P. roebelini, ST, (*Pigmy Date*). A slow growing dwarf palm especially suited to tub culture. The foliage is very fine and dainty, giving it an airy appearance. This is probably the best palm for conservatory and patio use. It is also excellent for hotel decoration.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00
8 in.	1.50	
10 in.	2.50	

Small tubs, \$3.00
Large tubs, \$5.00 to \$15.00

PTYCHOSPERMA macarthuri, T. Sometimes called *Cluster Palm*. A very formal small palm that suckers freely and has a small slim trunk. This is a rather rare palm here and deserves to be more used. Small tubs, \$3.50 each.

ROYAL PALM, (*Oreodoxa regia*), T. A very beautiful stately palm with a large bottle shaped smooth trunk. The large pinnate leaves are bright glossy green. This palm requires a quantity of water and grows best on low ground in protected places. Field grown, 3 to 4 ft., \$2.00; 4 to 5 ft., \$3.00; 5 to 6 ft., \$5.00. Large specimens, \$10.00 to \$50.00.

RAPHIS flabeliformis, ST, (*Raphis Palm*). A very attractive dark green cluster palm with rounded leaves which are cut to the center. It is a fine decorative palm for inside situations and is also suited for patios where an exotic effect is desired. This palm is not common and should be used more. 4 in., \$1.50; 6 in., \$2.50. Tubs, \$5.00 to \$20.00.

SEAFORTHIA elegans, ST, (*Illawarra Palm*). A very graceful palm which resembles the Royal. Its trunk is much smaller than the Royal and not quite so light colored. The leaves are even more graceful than those of the Royal. The general size is smaller than the Royal and it is more suited to inside work. Small tubs, \$2.50; large tubs, \$5.00 to \$10.00.

THRINAX, sp, H, (*Thatch Palm*). A very slow growing fan palm from the lower keys. Makes a good decorative palm in places where it must stand abuse. 4 in., \$1.00; 6 in., \$2.00 each.

WASHINGTONIA robusta, (*Chinese Fan Palm*). This is our fastest growing fan palm. The broad shining green leaves arch out gracefully from a tall straight trunk. The leaves are persistent even after they wither and unless trimmed off, hang down so as to hide the trunk. This palm is one of the best for street and parkway planting. 4 in., 50c, 6 in., 75c.

	Each	Per Ten
Field grown, 2 to 3 ft.,	\$1.50	\$13.50
3 to 4 ft.	2.50	22.50
4 to 5 ft.	3.50	32.50

Make your home grounds reflect
your own personality.

Conifers

In our locality there are a very large number of broad leaved evergreens which are much more adaptable to semi-tropical plantings, than are most conifers. A few types of homes here, however, are enhanced by conifers, so we carry those varieties which have proven successful here.

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

ARBORVITAE, H. While there are a great many varieties of Arborvitae we find that the four listed below give the best satisfaction here. Other varieties quoted on application.

BIOTA aurea nana, (Golden Arborvitae).

	Each	Per Ten
8 to 12 in.	\$.50	\$ 4.00
12 to 18 in.	2.00	18.00
Specimens	\$3.00 to \$10.00 each	

B. bonita The best clear green colored arborvitae.

B. compacta. Lighter green than bonita.

B. pyramidalis. Tall pyramid shaped.

	Each	Per Ten
12 to 18 in.	\$.50	\$ 4.50
18 to 30 in.	1.50	13.50
3 to 4 ft.	2.00	18.00
Specimens,	\$3.50 up	

CUPPRESSUS knightiana, H. A very beautiful upright cypress which resembles the Juniper in foliage; general outline cone shaped. 3 in., 25c.

C. sempervirens, H, (*Italian Cypress*). A tall slim tree. Used mostly for planting against houses where a tall tapering subject is desired. It needs support because the top sometimes gets too heavy for the stem. 3 in., 50c.

JUNIPERUS japonica sylvestris, H, (*Japanese Juniper*). One of the best of the dark bronze green junipers for this locality. Stands shearing. Has a fine natural pyramidal shape. 2 to 3 ft., \$4.00; 3 to 5 ft., \$5.50.

J. pfitzeriana. A fine low spreading juniper. Dark green color.

PODOCARPUS sinensis, H. (*Giant Yew*). A fine stately conifer that is said to reach a height of 40 to 50 feet. The general shape is pyramidal, unless sheared. It is very useful for backgrounds, as well as for specimen plants. It can be sheared and used in places where you would use an Italian Cypress and is better than the Cypress in this section.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	1.00	
Tubs	4.50	
Field grown, 3 to 4 in.,	\$4.00	

P. elongatus, H. A species with fine feathery leaves and drooping branches giving the effect of a weeping willow. Each: 4 in., 75c; 6 in., \$1.00; tubs, \$5.00 to \$10.00; boxes, \$2.00 to \$3.00.

P. nagi. A broad leaved species that gives promise of being a fine decorative tree. Each: 4 in., 50c; 6 in., 75c.

RETINOSPORA ericoides, H. A fine small dense growing conifer suitable for specimen plants. Tubs, \$2.50.

We handle a complete line of supplies listed inside back cover
of last page.

Roses and Azaleas

All of the plants listed under this heading are hardy throughout the state.

Azaleas are among our prettiest flowering shrubs. They come in rich and varied colors. The profusion of bloom is often so great that the leaves are entirely hidden. The greatest burst of bloom is in February and March. Some varieties have a blooming season of sixty to ninety days, depending on weather conditions. When not in flower, the evergreen Azalea is also beautiful for its green alone.

They are not difficult to grow if the conditions are right. The soil must be acid with plenty of vegetable matter, preferably secured from peat, muck or rotted oak leaves. Insects bother very little. Azaleas especially valuable where quick effects are desired as they may be transplanted when in full bloom.

AZALEA indica, H, (*Indian Azalea*). An extremely beautiful shrub in a wide variety of colors suitable for northern exposures and for planting under trees. Its blooming season is from November to April. The ground where Azaleas are to be planted needs especial preparation. See "Supplies."

	Each	Per Ten
6 to 8 in.	\$.50	\$ 4.50
8 to 12 in.	1.00	11.00
12 to 18 in.	2.00	18.00
Specimens, \$3.00 to \$10.00		

ROSES. Each fall we buy an entirely new stock of the finest grade of standard varieties, as well as some of the newer roses, and novelties. These are usually ready by the fifteenth of November. We do not buy any of the lower grades or any bargain roses except on special order. This insures you the biggest and best sizes.

There is a place on every lot for at least one rosebush and nothing will give you more satisfaction and pleasure if given the proper care. We are always glad to advise you as to the proper location, method of planting and care for your roses.

This year we will have a limited quantity of extra choice varieties for those that want better varieties. These plants will be identical with those grown each year by Mr. George H. Peterson, at 19th Ave. on 9th St. N. Prices on these plants will be \$8.00 and \$12.00 per dozen.

Common varieties, 50c each. \$5.00 per dozen.

See our stock before you buy!

Let us help you with plans to make your home grounds more attractive. Phone 83-250. Cheerful service.

Vines

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

ALLAMANDA Hendersoni, ST, (*Golden Trumpet*). One of the most popular vines in Florida. While it is considered tender it is seldom seriously injured by the cold. Leaves glossy green. Flowers yellow trumpets 4 to 5 inches across, produced the year around.

A. Williamsi. Similar to *Hendersoni* except that the flowers are about an inch smaller and the leaves are rougher. Blooms are more profuse and slightly fragrant.

Both varieties—	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes,	\$1.00	

A. purpurea. Similar to the last but with light purple flowers. Rare. Strong plants, \$1.50 each.

ANTIGONON leptopus, T, (*Rosa de Montana or Chain of Love Vine*). A strong growing vine from Mexico. The light green leaves are heart shaped. Flowers borne in long racemes, are a beautiful shade of pink. Sometimes frozen down but comes up from the root again the next season. Is at its best in the warmer months.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	9.00

ARISTOLOCHIA elegans, H, (*Dutchman's Pipe or Calico Flower*). A good vine with very dense foliage. Ever-green. Flowers blackish purple, veined and blotched with cream. 4 in., 35c each; \$3.00 per ten.

ASPARAGUS falcatus, H. The largest and finest of the asparagus ferns. The light green foliage is very decorative and can be used for cutting. Flowers small white and fragrant, are borne in long lacy racemes during the summer. Makes a very effective screen when trained up on trellis work.

	Each	Per Ten
2 in.	\$.10	\$.90
3 in.	.25	2.00
4 in.	.50	4.50
Boxes,	\$1.00	and tubs \$2.50

A. plumosus, T. A very finely cut leaf asparagus which makes very attractive sprays for use with cut flowers. Also makes a fine climber where there is not too much sun.

	Each	Per Ten
4 in.	\$.25	\$2.00
6 in.	.50	4.50

A. Cooperi. Makes a better vine than the preceding, but is not as good for cut sprays. Same price.

BIGNONIA speciosa, H. A fine fast growing vine with dark glossy green leaves. Large clusters of trumpet shaped lavender purple flowers from March to May.

B. unguis-cati, H, (*Cat's Claw Vine*). A fast growing, clinging vine. The trumpet shaped yellow flowers are borne in profusion in the spring. This is a fine vine where a wall or house must be covered quickly.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	9.00

B. venusta H. (*Flame Vine*). This is probably the most attractive of all the vines of Florida. Huge masses of orange red flowers sometimes completely hide its foliage. A very fast grower when once established. Small plants start slowly.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	9.00
Tubs	3.50	

BOUGAINVILLEA crimson lake, ST. This vine and the succeeding variety are equal to the flame vine in attracting attention. The color is a rich glowing crimson. Most attractive when massed on walls or supported against a house. Because the blooms are produced on the long new branches this species will not make a standard as will the following.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	7.00
Boxes	1.50	
Tubs	3.00 up	

B. glabra sanderiana. The rich masses of magenta purple bracts make a wonderful show. Almost a constant bloomer. Stands shearing to standards or tree shape. Each: 4 in., 35c; 6 in., 50c; boxes, \$1.50; tubs, \$2.00, \$2.50 up.

B. praetorius. Similar in growth and hardiness to Crimson Lake. Blooms, as profuse as Crimson Lake, are a beautiful deep yellow that shades to buff. Very attractive and sure to be a coming favorite. Very rare as yet. Strong plants, \$10.00 each.

CASSIA bicapularis, ST. The fine compound leaves of this plant make a beautiful tracery against walls. Quantities of yellow bloom borne in the early spring. Needs support for best effect. Small plants, 25c.

CLERODENDRON Thomsonae, ST, (*Bleeding Heart*). A fast growing vine with long panicles of red flowers enclosed in a white calyx. Blooms nearly the year around.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50

Tubs \$1.50 up

CLITORIA ternatea, H. A very beautiful light airy vine which grows rapidly. Bears quantities of deep blue pea shaped flowers through the summer. We also have a pure white form. Small plants 25c.

CRYPTOSTEGIA grandiflora, T. Rubber vine, sometimes called, erroneously, "*Purple Allamanda*". A fine plant with dark shining green leaves. Flowers tubular, rosy purple. This may be used either as a shrub or a vine with good pruning. It is sometimes grown in a standard shape.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	.75	

Boxes 1.00

DEGUELIA timorensis T, (*Jewel Vine*). A fast growing vine with long sprays of pure white, sweet scented bloom borne in summer and fall. Each: 4 in., 50c.

FICUS repens, H, (*Creeping Fig*). A wonderful plant for covering walls, houses, and other surfaces. It clings well to most any surface. Slow to start but fast growing when it starts.

	Each	Per Ten
3 in.	\$.25	\$2.00
4 in.	.35	3.00
6 in.	.50	4.50

F. pumila minima. A variety with very small leaves. Makes much finer tracery on a wall. 3 in., 35c.

HONEYSUCKLE, (Ionicera sempervirens), H, (*Coral Honeysuckle*). Strong, fast growing native climber. Flowers tubular and scarlet in color. Leaves green above, lighter underneath.

H. Hall's, H. The common honeysuckle of the South. Flowers white, turning yellow. Very fragrant. Each: 4 in., 35c; 6 in., 50c; boxes, \$1.00.

IPOMOEA horsfalliae briggsii, T, (*Brazilian Glory*). A very fine vine which has heavy, waxy, deeply cut green leaves. The blooms are borne in December and are a very showy deep carmine color, almost hiding the leaves when right. This plant is not common and is very hard to propagate. Small plants, \$1.00; larger plants, \$2.00; boxed plants, \$3.00.

JASMINUM beesianum. A climbing jasmine from China. It is rare here. Blooms are deep pink or rose and are fragrant. 3 in., 25c.

J. dichotomum. A new jasminum recently introduced by the department of agriculture. Masses of white blooms followed by blue berries. Small plants, 35c.

PERESKIA aculeata, T. (*Lemon Vine*). A climbing cactus with true leaves and edible fruit. Flowers of a greenish white color, borne in large numbers. 4 in., 50c.

PETRAEA volubilis, T, (*Queen's Wreath*). A twining vine with evergreen rough leaves, light green in color. Blooms of several beautiful shades of blue borne in large panicles throughout the winter and spring months. Strong plants, \$1.25.

PORANA paniculata, T, (*Snow Creeper*). One of the very best of the fall blooming vines which will be much more used when better known. It is a fast growing vine. The blooms are borne on the ends of the branches in great sprays of delicately fragrant white. Useful for cutting. Small plants, \$1.50. Boxed plants, \$2.50.

QUISQUALIS indica, T, (*Rangoon Creeper*). A fast growing climber with compound leaves. Blooms open white in the morning and turn red before night. Fragrant. 4 in., 35c; 6 in., 50c.

SOLANUM Wendlandi, ST, (*Paradise Vine*). When in full bloom this fine vine fully justifies its name. The rich masses of sky blue flowers are worth seeing. The leaves are large and rather coarse in texture but of a fine dark green color. It grows very fast even in poor soils.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	4.50
Boxes	1.00	9.00

SOLANDRA guttata, ST, (*Golden Chalice Vine*). A fast growing, soft, woody vine. The leaves are thick, glossy dark green. The blooms, which are six inches long and four to five inches across, resembling a huge golden goblet, are cream color the first day and deep yellow the third day. Main crop of bloom is in the fall but it sometimes blooms again in the spring.

Each	Pei Ten

Boxes, \$1.00 up

T. radicans, H, (*Trumpet Creeper*). A good vine with light green leaves and dark orange red trumpet shaped blooms. Native. Prices same as above.

T. ricasoliana, ST. The prettiest of all the Tecomas here. Foliage similar to radicans. Blooms light pink, borne in long sprays. The individual tubular blooms are about two inches across. When in full bloom in the fall and spring it is an immense mass of pink. Faster growing than the other species.

	Each	Per Ten
4 in.	\$.35	\$3.00
6 in.	.50	
Boxes	1.00	

THUNBERGIA grandiflora, ST, (*Sky Vine*). One of our most popular vines. It is a very fast grower once the roots are established. The leaves are a soft green in color and are long and pointed. The sky blue blooms three inches or more across are borne in clusters.

	Each	Per Ten
4 in.	\$.50	\$4.50
6 in.	1.00	9.00
Tubs, \$2.50 up		

T. grandiflora alba. Similar to the above but with broader leaves and snow-white bloom. Rare. Each: 4 in., \$1.00; 6 in., \$2.00; tubs, \$5.00.

TRACHELOSPERMUM jasminoides, H, (*Star or Confederate Jessamine*). A very beautiful vine with dark glossy heavy leaves. Blooms in the spring and is a mass of soft white fragrant flowers. 4 in., 50c; 6 in., 75c; boxes, \$1.00.

HEDERA helix, H, (*English Ivy*). Beautiful vines, suitable for growing in pots for decoration in the house, on porches and in patios. Can also be grown in the open to climb on trees or on the north side of buildings. Does best in the shade. The leaves are a beautiful deep green.

H. helix. Small leaved variety. Same as the above but with miniature leaves. Considered by many to be more delicate than the last. 3 in., 25c; 4 in., 35c.

H. helix. Same as the first but with beautiful cream and green foliage. 4 in., 50c.

VERBENA venosa, H. A trailing plant that makes a very attractive ground cover. It bears its pink blooms almost all the year. Small plants, 15c.

We like visitors at the Nursery. Corner Haines Road and
Lealman Ave., St. Petersburg, Fla.

Decorative Subjects

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

ÆCHMEA mariae-reginae, T. A broad leaved air plant from Costa Rica. Flowers borne on a spike during the summer. Color bright coral red with light blue tips. Very showy and of value for exotic effect in patios. May be grown in pots or in moss on a wall. \$1.00 each.
Other varieties in other colors available in small quantities. Rare varieties, \$2.50.

ALTERNANTHERA, H. Dwarf colored border plant used for borders and edging. Red, green or yellow.

	Each	Per 10	Per 100
	\$.10	\$.75	\$6.00

ASPARAGUS spengeri, H. Commonly called “*asparagus fern*”. This is indispensable for urns, hanging baskets, and porch boxes. The red berries are very attractive with the light green foliage.

	Each	Per Ten
4 in.	\$.25	\$2.00
6 in.	.50	4.50

COLEUS, T. Old time favorites for window gardens. They are suitable too for planting out in beds. When massed they make a fine show. Require a rich soil. Priced 15c to \$1.00 each.

DIEFFENBACHIA nobilis, T. An attractive green and white broad leaved plant that is most desirable for tub culture in patios and conservatories. Sometimes called Chinese Evergreen. 6 in. strong plants, \$1.00: tubs, \$2.50.

DRACÆNA, T. Most decorative plants, with high colors, gives a very tropical effect. They are best used for tubbed plants. Can also be used in window boxes and for beds. We have a wide variety in various colors.

	Each	Per Ten
4 in.	\$.50	\$4.00
6 in.	1.00	
Specimens to \$7.50		

D. indivisa. A fine leaved green dracena, suitable for baskets, and dish gardens. Also used for urns. Small plants, 15c.

FURCRÆA lindeni, H. A very fine decorative similar to the Agave. Leaves striped with white. 6 in., 50c; small tubs, \$2.50.

GYNURA aurantiaca, ST, (*Velvet Plant*). A very beautiful plant with soft velvety purple leaves. 4 in., 50c.

HEMIGRAPHIS colorata, TR. For large hanging baskets this plant is most striking. The leaves are bronze green above and purple beneath. Strong plants, 25c.

MARANTA arundinacea, T. A plant for moist situations. Beautiful variegated green and white canna-like foliage. We also have two low growing species with broad leaves. One is variegated dark green and cream and purplish below. The other is mottled bronze and green. Either one is suitable for Dish Gardens, Terrariums, or the moist sides of rock gardens. 3 in., 35c; 4 in., 50c; 6 in., 75c.

MIMOSA pudica, H, (*Sensitive Plant*). While this small tree is beautiful its chief bid for notoriety is its ability to fold up its leaves when touched. Small plants, 25c.

MONSTERA deliciosa, T. A very beautiful climbing aroid which gives a very tropical effect. The enormous leaves are variously cut. Makes a good climber for large tree trunks. Does best here in heavy shade. Needs protection during cold times. 4 in., \$1.50; 6 in., \$2.50; tubs, \$5.00.

NOLINA tuberculata, H. An uncommon decorative plant with a large swollen base. Leaves and habit resemble a yucca. Eventually reaches a height of six feet or more. Small plants, \$1.00 each.

PANDANUS Veitchii, H, (*Ribbon Plant*). A beautiful plant with long green and white leaves. Especially fine for vases and urns, window boxes and for use in the patio. Can also be used for specimen plants where it will grow three or four feet high. Sometimes used for hedge work also. Small plants, 25c; 4 in., 50c; 6 in., \$1.00; 8 in., \$1.50.

P. utilis, ST, (*Screw Pine*). An odd tropical appearing plant. When small it resembles a small pineapple plant. As soon as it reaches some size, the leaves grow in a spiral around the stem. Old plants are often branched having the spiraled tufts of leaves on the ends of the branches. Leaves when young are a reddish bronze and later green.

	Each	Per Ten
Small plants	\$.25	\$2.00
4 in.	.50	
Tubs	3.50 up	

PHORMIUM tenax, H. A light green dracena-like plant that is very attractive. Small plants, 50c.

RAVENALA Madagascariensis, T, (*Travelers' Palm*). A very tropical plant which at first glance resembles a banana. The leaves are in two ranks giving a flat or fan shape appearance. Blade of the leaf is large and flat. A fine rare decorative subject. Needs protection here. Strong plants, \$2.50 up.

STRELITZIA reginae, T, (*Bird of Paradise*). This is the real "Bird of Paradise" flower. The deep reddish orange and blue blooms are most striking. The plant resembles a small Travelers' Palm. A very rare and unusual plant, best used as a tub plant for conservatories or patios. Small plants, \$2.50; blooming size, \$20.00.

S. nicolai. Similar to the above but with larger leaves and faster growing. Blooms blue and white. Small plants, \$1.50; large plants, \$10.00.

Suggestions and estimates cheerfully given.
Phone 83-250 for appointments.

ROYAL PALM

Rock Garden and Allied Subjects

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

AGAVE, H, (*Century Plant*). We carry several varieties of this fine decorative. Some are suited for planting in the open and others are suited for use in the patio. Many of them are so similar that descriptions are inadequate. We invite your inspection. Prices range from 50c to \$2.50.

ALOE fruticosa, H, (*Aloe*). A very pretty decorative resembling a cactus. Suitable for Rock gardens and other dry places. Small plants, 15c; large plants, 50c, and specimens to \$2.50.

We also have a collection of rare species of Aloes. Some of these are very beautiful. They are all suitable for rock garden work, or for dish gardens. Prices from 25c to 75c each.

ANTHURICUM sp, T. A beautiful small variegated leaved plant suitable for dish gardens, fern baskets, and window boxes. Small plants, 25c each.

CACTUS. Mostly hardy here. We carry a large variety of cactus suitable for all purposes from the smallest cactus gardens to large outside plantings. All cacti as a rule like a very sunny and well drained situation. Some of the blooms are exquisite beyond description. Priced from 25c to \$5.00 each.

CRASSULA arborescens, ST. A very thick leaved fleshy succulent which makes a most attractive pot plant. Can also be used in the rock garden. Small plants 25c; large plants, 50c.

We also have several other varieties of Crassulas suitable for cactus and dish gardens.

DIEFFENBACHIA nobilis, T. A most attractive green and white broad leaved plant desirable for tub culture in patios and conservatories. It is also to be desired for use on the moist, rich, shady side of the rock garden.

ECHEVERIA secunda glauca, H, (*Hen and Chickens*). An old time favorite that has found a new use in dish gardens. The fleshy light green leaves grow in a beautiful rosette. Blooms yellow and pink.

E. Weinbergia, H. Another species with soft rosy grey green leaves. The rosettes are not so perfect as the last but grows on longer stems, and if planted in a basket will hang down and turn the heads up to the light. Both species: Small plants, 15c; larger plants, 25c.

EUPHORBIA arboreus, T, (*Monkey Candle*). An odd, much branched plant with very few leaves. Small plants are very attractive in dish gardens. Small plants, 10c to 25c.

E. lacteus, T. A three-angled, much branched plant resembling a cactus. Large specimens are very showy. The small plants are fine for dish gardens and the larger plants for rock gardens. Small plants 25c; 4 in., 50c; 6 in., \$1.00 each.

E. splendens, T. (*Crown of Thorns*). A thorny, woody stemmed plant with pretty scarlet blossoms. Suitable for pot culture or for dry rockeries. Prices same as the last.

MARICA gracilis, H. An Iris-like plant which bears its white, blue, and amber flowers towards the ends of the leaves. A good plant for the wet side of the rockery. Also makes a good pot plant. Small plants, 35c each.

MESEMBRYANTHEMUM roseum, H. A low growing sun loving plant with heavy fleshy leaves. It is almost covered with rosy pink blooms in the spring. Small plants, 15c.

MUHLENBECKIA complexa, H. (*Wire Fern*). A fine small leaved plant resembling a maiden hair fern. The flowers are small, white and are borne in great profusion. Can be used in a wide variety of shady situations. Strong plants, 50c.

NEPHTHYTIS liberica, T. A plant with many uses. The leaves are dark green, and arrowhead in shape. Will grow well in moist soil or in water, and is much used for growing in water in wall vases for interior decoration. Very desirable for this purpose for it holds up well in quite dark places. Strong plants, 25c.

N. variegata. Similar to the last but more dwarf and with a white stripe through the leaves. Leaves are more divergent. Strong plants, 35c each.

OPHIPOGON jaburan, H. (*Snake's Beard*). A lovely low growing grass like plant used for small borders or to cover very shady places where grass does not grow. Divided into small pieces it is very pretty in dish gardens. Divisions, 10c; whole clumps, 25c each.

O. jaburan variegata, H. Similar to the last but with longer wider leaves striped with green and white. Beautiful spikes of lavender bloom, which last a long time, are borne in the summer. Strong plants, 50c.

PEPEROMIA obtusifolia, H. A very heavy leaved plant which has a waxy shining appearance. The normal habit is about a foot high. This is a fine subject near shady pools and for naturalizing in shady woodsy places. It is said to stand salt spray. 2½ in., 15c; 4 in., 25c; 6 in., 50c.

PEDILANTHUS tithymaloides, T. (*Red Bird Cactus*). While this plant is not a true cactus it has received that name because of its odd appearance. The zig zag stems also give it the name of the Devils' Backbone. Its light green leaves are borne at the angles of the stems and small red flowers at the tips of the branches. This is an old but a good plant in any planting of oddities.

P. t. variegatus. Similar to the last but with pretty cream and light green leaves that are sometimes shaded rose.

Both species: small plants, 15c; larger plants, 25c.

PHILODENDRON cordatum, ST. There is perhaps no other vine except the English Ivy which is as satisfactory for inside culture as this delightful grey green plant with its large heart-shaped leaves. It can also be used for planting around the base of trees that will support it. It can also be grown in water. 2½ in., 25c; 3 in., 35c each.

PILEA sp., H. A fine light green creeping plant that is a most excellent ground cover around pools and rockeries. Small plants, 15c each.

P. microphylla, ST, (*Artillery Fern*). While not a true fern, its lacy texture gives that impression. It is very suitable for house culture or for window boxes. It can also be used for small borders in shady places. Small plants, 15c; larger plants, up to 50c.

POTHOS aurea, ST, (*Hunter's Robe*). This fine aroid is suitable for use in a wall vase in the house. The foliage is yellowish green streaked with yellow. If planted out in a shady protected place near a tree or other support it will climb by means of its aerial roots. In such a situation the leaves become very large and showy. 2½ in., 25c; 3 in., 35c; 4 in., 50c.

RUSSELLIA juncea, ST, (*Coral Plant*). A green leaved and stemmed plant which reminds one of a Rush at first glance. The branches are wiry and recurving. The small blooms are coral red and are borne in profusion all the year. The effect of a plant in bloom is that of a fountain. It is a fine plant where contrast is desired. Can be used to good effect near pools and rockeries. 3 in., 35c; 4 in., 50c each.

SANSEVIERIA cylindrica, T, (*Bow String Hemp*). A very odd and curious species with round tapering leaves. Deserves a place in any garden of oddities. Per leaf, 20c.

S. suffruticosa. Similar to the above but with leaves not entirely round. The plant also grows in more of a rosette type. Strong, 3 in., 50c.

S. parvae. A species with black green, narrow leaves. One of the prettiest of all the sanseverias. Strong 3 in., 50c.

S. pumila. Similar to zeylanica but much smaller and with grey leaves. Also more inclined towards a rosette type. Strong 3 in., 50c.

S. zeylanica, T. A fine green and grey subject for contrasts in the rock garden. It is also suitable for massing in shady places. Practically all of the Sanseverias may be used for these places too. In addition they can be used as pot plants for the home or for hotel decoration for they will stand an unlimited amount of abuse. They will live for months in very dark places and can go for long periods without water. However, they reach their highest development in places where they have an abundance of water and a rich soil. Prices this variety, 10c per leaf.

S. laurenti. The growth is similar to *zeylanica* but with a band of yellow down each side of the leaf. 12½c per leaf except specimens in pots which range from \$1.00 to \$2.00.

S. kirki. A very broad-leaved species which bears beautiful spikes of white, bloom more freely than the other varieties. 25c per leaf.

S. guineensis. Similar to *kirki* but much the tallest and rankest grower of all. 10c per leaf.

SELAGINELLA emmeliana, T. (*Club Moss*). The name is misleading for it is hard to imagine a more delicate fern-like plant. Requires an abundance of water and a warm, shady situation. This is an especially fine plant for terrariums. Nice pot plants, 25c.

TALINUM patens variegata, T. A small decorative plant for rockeries when they are not too dry and for window boxes or for small borders in the patio. Foliage cream and white and green. Flowers all pink and yellow.

	Each	Per Ten
3 in.	\$.15	\$1.40
4 in.	.25	2.00

TRANDESCANTIA discolor, H. (*Moses in the Cradle*). An attractive Wandering Jew with upright purple and green leaves. We also have a green and white variety and a yellow and silvery green variety. The three may be used as ground covers in the rockery if there is some moisture. They may also be used for hanging baskets or window boxes. Small plants, 15c; 3 in., 25c; 6 in., 50c.

We have a continuous flower show from November to June.
We like lookers.

Ferns, Grasses and Bamboos

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

BAMBUSA nana distica, H. A fine dwarf variety making dense clumps.

B. nana Alphonse Karri. A good small cane type which makes large clumps about thirty feet high with canes alternately striped green and yellow.

B. nana argentea striata. Another variegated form similar to the last.

All species, small divisions, \$1.00; specimen clumps to \$15.00.

CORTADERIA selloana, H, (*Silver Pampas Grass*). This is the most beautiful of all the tall flowering grasses. It makes large clumps of fine light grey leaves with the tall silvery plumes standing well above the foliage. Divisions, 50c; clumps, \$3.00.

CYPERUS alternifolius, ST, (*Umbrella Grass*). The tall stems have a leaf at the top resembling an umbrella. A fine subject for pools or moist ground. Small plants, 25c.

C. papyrus, H, (*Papyrus or Moses Bulrush*). One of the best marsh subjects for planting near or in pools. The tall stems are crowned with long plummy masses of thread like leaves. Divisions, 50c; clumps, \$1.00.

ALSOPHILA Australis, T, (*Australian Tree Fern*). A very beautiful fern with thick hairy stems and gracefully arching fronds. Suitable for tub culture in Conservatories and Patios as well as for out-of-doors in shady places. Requires plenty of water. 4 in., \$1.00; 6 in., \$2.50; Tubs, \$5.00 to \$25.00.

FERNS. We carry a representative stock which includes all of the common decorative ferns as well as some of the rarer ones. They are all grown in pots so that they may be moved at any time with success. Common varieties are priced from 35c for nice 4 in. pots to \$5.00 for large specimens. The rarer varieties range from 50c for 4 in. pots to \$2.00 for 6 in. size.

LYGODIUM scandens, T, (*Climbing Fern*). A very delicate climbing fern which is quite rare. The foliage is very lacy and makes a fine decoration. 4 in., 75c; 6 in., \$1.00.

CENTIPEDE grass, H. A comparatively new grass here. It is quite fine leaved, giving a soft pleasing texture. There are from 1500 to 2000 cuttings to the bushel, which should be planted six to eight inches apart in rows ten inches apart and kept well weeded until established. Per bu., \$3.00.

ST. AUGUSTINE grass, H. The most satisfactory lawn here when properly started and cared for. We have developed a plan which insures a good even level lawn and are glad to quote a price on any size job. We have also worked out a plan to oversee the care of your lawn and shrubbery during the months you are not here which we will gladly explain to anyone interested.

ZOYSIA tenuifolia, H. An extremely fine leaved grass very desirable for planting in broken walks and between the paving stones in out-of-door living rooms. Can be walked on without injury and does not need mowing. A square foot makes many thousand plants. Per square foot, \$2.00.

Foundation Planting of Jacob's Coat

Our stock of rare and unusual plants
must be seen to be appreciated

Bulbs

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

We are experimenting with new bulbs all the time. Of some of the more successful ones we carry a small stock and invite your inquiries.

AGAPANTHUS umbellata, ST, (*Blue Lily of the Nile*). A rare and beautiful perennial subject. Should be planted where they can stay. Requires some shade. Blooms a delightful shade of light blue. 6 in. pots, \$1.00; blooming size, \$2.50.

AMARYLLIS, (Hippeastrum), H, (*Amaryllis or Barbadoes Lily*). Beautiful lily-like spring flowering bulbous plants, in a great range of colors. Some of these new hybrids are of enormous size and are in all shades from pure white to deep red. They are fine for naturalizing or for planting in masses or beds. All of our hybrids are from hand pollinated seed, crossed with regard to color and size.

Dry bulbs available Nov. and Dec. Later can be had in pots.

Blooming size bulbs only, 75c and \$1.00 each.

AMOMUM cardamomum, ST, (*Cardamon Plant*). A plant suitable for moist locations. The leaves are thick and heavy and are very decorative. They give off a pleasant ginger odor when crushed. Divisions, 35c.

ANTHOLYZAS, H. A bulbous plant requiring the same culture as gladiolus. A rare plant producing a spike in the same manner as a gladiolus. Blooms 30 to 50 on a spike. Orange in color. Very odd and attractive. 10c each; \$1.00 dozen.

CALADIUM bulbosum, T, (*Fancy Leaved Caladiums*). In these plants we have some of the most beautiful and strikingly colored leaved plants for use in the south. While making fine potted plants for the house they make the best show when planted out in a moist situation with half shade. The leaves die down in the winter. Dry bulbs are ready in December and may be purchased that way or later as pot plants. Priced from 25c to \$2 each, depending on rareness of the variety.

CALLA Devoniensis, H, (*Godfrey Calla*). The best calla for this section. Very free flowering. Requires a very rich soil for best results, and is most suited to quite moist soils. Dry tubers, Oct. only. 6-in. pots at any time, 50c each.

DUTCH IRIS. These bulbous iris do very well here during cool seasons but do not carry over well. They are most attractive and should be more used. Ready Oct. 15th. Separate colors, \$1.00 per dozen.

EASTER LILY, H. Very easily grown here. Requires a rich, well drained soil for best results. The bulbs may be left in the ground through the summer. Locally grown bulbs, variety *Harrisi*, 10c each; \$1.00 dozen. (*Variety Erabu*). Imported fresh from Japan, ready Oct. 15 to Dec. 1st, 25c each; \$3.00 dozen.

GLADIOLUS, H, (*Sword Lily*). No other bulbous plant has given as much pleasure to as many people as has the Gladiolus. It is not fussy in its requirements and will grow for any one if given six square inches of ground and an occasional drink. Of course, like most plants, they respond to a little petting and will do as much for you as you do for them. They do best in a slightly acid soil that is well drained. Should be well watered during the blooming time.

We have a very large number of varieties that covers all the colors. Our planting season is from October first to December first and we can supply bulbs at any time during that season. Separate varieties from 50c to \$2.00 per dozen. Mixed colors, 25c to 50c per dozen. Special prices by the 100 or 1000.

HEDYCHIUM coronarium, T, (*Ginger Lily*). A fine plant for planting near pools and other moist places. Plants tall, light green, somewhat resembling a canna. The pure white fragrant flowers are borne during the summer and fall in quantity. Divisions, 25c; large plants, 50c.

HEMEROCALLIS, H, (*Day Lily*). Fine plants for borders and for mixing in small mass plantings. The leaves are light green and sword shaped, and the blooms are borne on stalks which stand well above the foliage. We have at present a dwarf variety with light lemon yellow blooms; a tall variety with deep yellow blooms which is a strong grower; and a double orange which is very attractive. Fine for planting around pools. Strong divisions, 25c. Whole clumps, \$1.00.

ISMENE calathinia, ST, (*Peruvian Daffodil*). A bulbous plant related to the crinums. Blooms, white with ragged petals. Delightful fragrance. Blooms in the summer and fall. Dry bulbs available in December. Blooming size bulbs, 25c; \$2.50 per dozen.

MORÆA iridoides, H, (*Natal Lily*). This plant takes the place of Iris in this locality. The leaves are dark green, narrow and tapering. The blooms are white, marked with yellow and a touch of blue. Very delightful plants for the border. Strong divisions, 25c. Clumps, \$1.00.

ZEPHYRANTHES rosea, H, (*Fairy Lilies*). All that the name implies. The dainty bell shaped blooms are a light rosy pink. They can be flowered at least twice a year, if properly handled. New bulbs bloom six to seven weeks after planting. Bulbs, 10c each; \$1.00 per dozen.

Z. ajax. A deep yellow form. Very beautiful. Rare. Bulbs, 25c each; \$3.00 per dozen.

Take a walk into heaven on earth, our Sweet Pea Garden
in January. Corner Haines Road and Lealman Ave.

Fruits for the Home Grounds

Explanation of Symbols: **H**, hardy at St. Petersburg; **ST**, should not be exposed to cold north winds; **T**, tender, put in protected places; **TR**, tropical, cover or move inside during cold weather.

AVOCADO, T. A fine tree on any well drained soil, one that should have a place on every home ground. The fruits are very rich in proteins. In addition to the fruit it is a good shade tree. We list only the winter bearing varieties.

(*Wagner*). Very free fruiting. Ripens midwinter.

(*Lula*). A very hardy variety. Ripens December to March.

Strong boxed plants, \$2.00 each. Tubbed plants, \$3.00.

CARYOPHYLLUS jambos, T, (*Rose Apple*). A tall shrub or small tree. Evergreen. Bears a pinkish white fruit which has a very agreeable rose flavor and scent. Useful for preserves and candy making. Needs protection from cold.

	Each	Per Ten
3 in.	\$.35	\$3.00
4 in.	.50	4.50

CASIMIROA edulis, ST. A large shrub or small tree bearing round smooth yellowish fruits the size of a small orange. Pulp sweet with a peach flavor. 4 in., 50c; 6 in., \$1.00.

CITRUS FRUITS. Every home should have one or more trees of some variety of citrus fruit for ornamental purposes as well as for utility. Many of the smaller fruited varieties are especially attractive when grown in tubs for ornament. All varieties do well in St. Petersburg except on the low ground. In such localities it is well to plant only the small fruited varieties budded on a stock which will stand wet soil conditions.

Citron	1.50 ea.

FIG, H. We list and carry in stock only the Brown Turkey variety as that seems to do best here. Fig trees should be planted near a wall or house foundation, or in an especially prepared piece of ground for best success. Nice strong plants, 50c; tubbed plants, \$1.50.

LUCUMA nervosa, ST, (*Egg Fruit*). A small attractive tree bearing round yellow fruits with soft deep yellow flesh, resembling a hard boiled egg in texture. Flavor sweet and rich. Large plants, \$2.00 each.

MANGO, (Mangifera indica), T. A very important fruit for this section, one that should have a place in every home planting. The tree itself is good shade and bears delicious fruit which can be used in a variety of ways. Some varieties are as luscious as a peach. The varieties we offer are all stringless.

(*Hayden*). This variety has the most beautiful fruit of all. It is of large size, yellow in color with a large rosy cheek. The flesh is stringless and of fine flavor.

(*Pico*). A long yellow fruit of very large size with small seeds. Flesh very rich and sweet.

Boxed plants both varieties, \$2.50 each.

PAPAYA, (carica papaya), T, (*Melon Tree or Papaya*). A very ornamental tree up to twenty feet high. The large primately cut leaves are very decorative and the flowers have a delicious fragrance. The fruit weighs up to twenty pounds or more and has a very high pepsin content, making it one of the most desirable fruits for people troubled with indigestion. Male and female blooms are borne on separate plants and unless there are male trees in your neighborhood, both kinds must be planted. New varieties have been put out for which it is claimed that the male tree will bear fruit. It is our observation that the fruit on these male trees is worthless. We have under propagation now a red variety to be released next year, which gives great promise. Strong plants, 50c each; \$4.50 per ten.

PASSIFLORA edulis, ST, (*Passion Fruit*). A very fast growing vine with bright green leaves and white purple flowers. Fruit is about two inches thick and purple in color. The juice is used in punches and the pulp is used for salads. Nice plants, 50c.

GUAVA, (Psidium), cattleyanum, H, (*Cattley Guava*). A strong growing evergreen shrub with dark green leaves. Fruit red, ripening in late summer. Flavor very agreeable. Makes fine jellies. This shrub is also very attractive as a hedge plant. Stands shearing.

G. lucidum, (*Yellow Chinese Guava*). Similar to the last but with lighter foliage and a more open growth. Fruits a little smaller, yellow, sweet in flavor, and borne in the late fall and winter.
